microwave power products division

CPI Microwave Power Products:

New Product Labels

Beginning on December 1, 2014, a new label will be used on helix TWTs. The new label provides a uniform placement for the product type, serial number and operational parameters for optimal performance. The new label has a white background with black writing and graphics.

In the case where two labels are currently used to display the product type, serial number and operational parameters, the new label will combine these values into one single label.

The new label will provide aesthetic consistency and clarity from TWT to TWT, improving MPP production and customer implementation of our helix products. In addition, the new label can be custom configured to each product to include all critical operational parameters.

The new label will be rolled-out as each product incorporates this new part. If you have any questions about the new label, please [contact a CPI sales rep.](#)
