

Built for Satellite Communications Uplink Applications

Provides 2250 watts of CW power in a compact nine rack-unit package, digital ready, for wideband, single and multi-carrier satellite service in C-band.

Cost Effective and Efficient

Employs a high-efficiency dual-depressed collector helix traveling wave tube backed by many years of field-proven experience in airborne and military applications. Collector design optimized for cool operation. The amplifier is well-suited for transportable and fixed earth stations where prime power is limited.

Reliable

Designed and built to survive in extremely adverse environmental conditions. Its CAN-Bus architecture improves reliability and noise immunity. CPI's optional LifeExtender technology significantly increases TWT lifetime.

Simple to Operate

User-friendly microprocessor-controlled logic with integrated computer interface, digital metering, pin diode attenuation, integrated linearizer for improved intermodulation performance, and an optional BUC for use with C-band modems.

Easy to Maintain

Modular design and built-in fault diagnostic capabilities, with convenient and clearly visible indicators for easy maintainability in the field.
