Compact and Easy to Use
The CPI low profile remote controller is an indoor, rack-mountable panel that provides local control and monitoring for up to ten amplifiers (HPAs). Alternatively, it can provide full M&C of CPI 1:1 or 1:2 redundant and 1:1 power combined outdoor systems, when the associated HPAs are equipped with optional switch controllers. The amplifiers can be easily controlled and monitored by selecting the appropriate amplifier on the bright, fluorescent display and making any adjustment using the navigation keys on the front panel. User’s M&C system can be connected to either the controller’s RS-485/422 or RS-232 serial interface, or via Ethernet port.

Worldwide Support
Backed by over two decades of satellite communications experience, and CPI’s worldwide 24-hour customer support network that includes fourteen regional factory Service Centers.
