

COMMUNICATIONS & POWER INDUSTRIES INTRODUCES

TOUCHPOWER™ GEN IV KPA AT IBC2017 SHOW

AMSTERDAM, Netherlands - September 13, 2017 --- Communications & Power Industries LLC (CPI) is introducing touchscreen capability to its heralded GEN IV klystron power amplifier (KPA) product line at the IBC trade show in the Netherlands this week. This year's IBC trade show is being held at the Amsterdam RAI Exhibition and Convention Center. The GEN IV is the latest in the Satcom & Medical Products Division's (SMP) broad portfolio of satellite communications amplifier products to feature CPI's industry-leading TouchPower™ local interface.

“CPI's GEN IV product line is a tried and true satcom industry stalwart, relied upon by customers around the world,” said Gerard Charpentier, CPI's vice president of business development for SMP Satcom Products. “In order to make these high-powered amplifiers an even more dependable choice for our customers, CPI is also applying some other innovative technologies to the GEN IV product line. The addition of a modernized air cooling system to lower internal temperatures will result in even longer lifetimes for klystrons, which already typically operate for many years without requiring replacement. The new TouchPower GEN IV also boasts SNMP interface capability; a new RF power meter providing direct average power readings, and enhanced event log capability.”

For more information on the new TouchPower series of GEN IV KPA amplifiers, visit www.cpii.com/kpa, call CPI SMP Division +1 (650) 846-3803, or visit www.cpii.com/satcomsales to find your nearest sales representative.
