Communications & Power Industries Provides Quad-Band Radome for Viasat Roaming Demonstration

PALO ALTO, Calif. - September 16, 2014 - The Radant Technologies Division of Communications & Power Industries LLC (CPI) provided a novel, quad-band satellite communications radome to support the recent successful flight demonstrations of ViaSat, Inc.'s (Nasdaq: VSAT) first integrated Ku-band and Ka-band airborne satellite terminal. The demonstrations showed that the ViaSat terminal, utilizing a radome from the CPI Radant Technologies Division, can switch dynamically among six satellites and three satellite networks across both Ku-band and Ka-band frequencies. The Ku/Ka-band terminal and radome are intended to provide global roaming capability for commercial and government aircraft, permitting the aircraft to connect to the particular satellite network that can provide it with the best service in its current location.

CPI Radant Technologies Division developed the custom radome for ViaSat's integrated Ku/Ka-band terminals using patented technology that enables coverage of the entire Ku-band and Ka-band frequencies with unequalled radio frequency (RF) transmission performance. As a result, the radome is uniquely suited for commercial and governmental satellite communications applications, including commercial inflight broadband connectivity and entertainment services such as audio and video streaming, Internet access, etc. CPI Radant Technologies Division designed the radome to interface with the numerous satellite communications installations, making it suitable for retrofit on existing aircraft and for inline fit on new aircraft. The radome meets or exceeds all FAA safety standards, including the enhanced bird-strike survivability requirements.

CPI Radant Technologies Division's quad-band radome has been in production for several months, and initial deliveries have been made. Work on the radome is being performed in Stow, Mass.

"ViaSat's Ku/Ka-band satellite terminal represents an enormous step forward for global connectivity, and our radome played a critical role in its successful flight demonstrations," said Dr. Jean-Claude Sureau, president of CPI Radant Technologies Division. "With its coverage of both the Ku- and Ka-band frequencies and the quality of its RF transmission performance, the development and production of a quad-band radome for an integrated Ku/Ka-band satcom terminal is a milestone in the evolution of wideband satcom radomes. It is yet another example of CPI Radant Technologies Division's ability to innovate and produce customized radomes for a wide variety of specialized and demanding technologies."

About Communications & Power Industries LLC

Communications & Power Industries LLC, headquartered in Palo Alto, California, is a subsidiary of CPI International Holding Corp. and CPI International, Inc. and a leading provider of microwave, radio frequency, power and control solutions for critical defense, communications, medical, scientific and other applications. Communications & Power Industries LLC develops, manufactures and distributes products used to generate, amplify, transmit and receive high-power/high-frequency microwave and radio frequency signals and/or provide power and control for various applications. End-use applications of these systems include the transmission of radar signals for navigation and location; transmission of deception signals for electronic countermeasures; transmission and amplification of voice, data and video signals for broadcasting, Internet and other types of commercial and military communications; providing power and control for medical diagnostic imaging; and generating microwave energy for radiation therapy in the treatment of cancer and for various industrial and scientific applications.

Certain statements included above constitute "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements provide our current expectations, beliefs or forecasts of future events. These statements are not guarantees of future performance. Forward-looking statements are subject to known and unknown risks and uncertainties, which could cause actual events or results to differ materially from the results projected, expected or implied by these forward-looking statements. These factors include, but are not limited to, competition in our end markets; our significant amount of debt; changes or reductions in the U.S. defense budget; currency fluctuations; goodwill impairment considerations; customer cancellations of sales contracts; U.S. Government contracts; export restrictions and other laws and regulations; international laws; changes in technology; the impact of unexpected costs; the impact of a general slowdown in the global economy; the impact of environmental laws and regulations; inability to obtain raw materials and components; and the impact of unexpected results of, or issues in connection with, dispositions and acquisitions. These and other risks are described in more detail in our periodic filings with the Securities and Exchange Commission. All future written and oral forward-looking statements attributable to us or any person acting on our behalf are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. New risks and uncertainties arise from time to time, and it is impossible for us to predict these events or how they may affect us. We undertake no duty or obligation to (i) publicly revise any forward-looking statement to reflect circumstances or events occurring after the date hereof, (ii) to reflect the occurrence of unanticipated events or changes in our expectations or (iii) to publicly correct or update any forward-looking statement if CPI becomes aware that such statement is not likely to be achieved.
